

TEXAS ELECTRIC AND LIGHT

PROJECTS PORTFOLIO STRATEGY GUIDE

Version: 1.0

Date: January 2026

Purpose: Comprehensive strategy for project portfolio pages, geo-tagging for local SEO, and Google Maps visibility optimization

STRATEGIC OVERVIEW

Why Projects Pages Matter for Local SEO

Project portfolio pages serve as geographic proof points for Google. Every completed project with proper geo-tagging tells Google: "This business actively works in this location." Unlike neighborhood landing pages that claim you serve an area, project pages prove it with documented work.

Strategic Objectives

- **Geographic Proof:** Create location signals across your service area through documented project locations
- **Google Maps Visibility:** Geo-tagged projects improve local pack rankings for surrounding areas
- **Commercial Credibility:** Showcase commercial projects to win larger bids and institutional work
- **Service Demonstration:** Visual proof of capabilities across all service categories
- **Keyword Targeting:** Each project targets long-tail location + service keywords

How Geo-Tagging Creates Local SEO Value

Google uses multiple signals to determine local relevance. Geo-tagged project pages create these signals:

1. **Schema.org Place markup** with latitude/longitude coordinates
2. **Address mentions** in content (neighborhood/city level, not exact addresses for privacy)
3. **Image EXIF data** with location metadata (when available from phone photos)
4. **Internal linking** from neighborhood pages to relevant projects
5. **Content relevance** with local landmarks, building types, and area-specific details

URL STRUCTURE & FILE ORGANIZATION

Directory Structure

/projects/ - Projects section root

URL Naming Convention

Project URLs should follow this pattern for maximum SEO value:

Pattern: /projects/[category]/[service-type]-[neighborhood]-[identifier].html

URL Examples

Project Type	URL Example
Commercial Panel Upgrade	/projects/commercial/panel-upgrade-downtown-austin-2024.html
Restaurant TI	/projects/commercial/restaurant-electrical-south-congress.html
Residential EV Charger	/projects/residential/ev-charger-installation-westlake.html
Whole Home Rewire	/projects/residential/whole-home-rewire-tarrytown.html
Pool Electrical	/projects/specialty/pool-electrical-lake-travis.html

PROJECT CATEGORIES

1. Commercial Projects

Strategic Focus: Build credibility for larger commercial bids, demonstrate institutional capabilities

Project Types:

- Tenant Improvements (retail, restaurant, office buildouts)
- Panel Upgrades and Service Changes
- New Construction Electrical
- Lighting Retrofits and Upgrades
- Commercial EV Charging Stations
- Industrial and Warehouse Electrical
- Municipal and Institutional Work (fire stations, schools, medical)

Target Keywords:

- "commercial electrician austin"
- "restaurant electrical contractor austin"
- "office electrical installation [neighborhood]"
- "tenant improvement electrical austin"

2. Residential Projects

Strategic Focus: Showcase premium residential work, support neighborhood page SEO

Project Types:

- Panel Upgrades (100A to 200A, 200A to 400A)
- Whole Home Rewiring
- EV Charger Installations
- Smart Home Integration
- Lighting Design and Installation
- Generator Installations
- Remodel Electrical (kitchen, bathroom, additions)

Target Keywords:

- "panel upgrade [neighborhood] austin"
- "ev charger installation [neighborhood]"
- "electrician [neighborhood] texas"
- "home rewiring austin"

3. Specialty Projects

Strategic Focus: Differentiate with unique capabilities, target niche searches

Project Types:

- Pool and Hot Tub Electrical
- Outdoor Living (kitchens, patios, entertainment areas)
- Landscape Lighting
- Solar Integration

- Battery Backup Systems
- Historic Home Electrical Upgrades

INDIVIDUAL PROJECT PAGE TEMPLATE

Required Page Sections

Each individual project page should include these sections in order:

1. Project Header

- Project title (service type + location)
- Project category badge (Commercial / Residential / Specialty)
- Location (neighborhood/city - not exact address)
- Completion date (month/year)
- Hero image of completed work

2. Project Overview

- Brief project summary (2-3 sentences)
- Client type (without revealing identity)
- Project scope and objectives
- Key challenges addressed

3. Scope of Work

- Detailed list of services performed
- Equipment installed (brands/specifications when relevant)
- Technical details that demonstrate expertise
- Code compliance notes

4. Photo Gallery

- Before photos (if available)
- During installation photos
- After/completed photos
- Detail shots of key work
- All images with descriptive alt text including location

5. Project Details Box

Field	Example
Location	Westlake, TX
Project Type	Panel Upgrade
Completion Date	January 2026
Duration	2 Days
Property Type	Single Family Home
Services Provided	Panel Upgrade, Surge Protection, Permit

6. Results & Benefits

- Outcome of the project
- Benefits to the client
- Any measurable improvements (energy savings, capacity increase, etc.)

7. Related Services CTA

- Link to related service page
- "Get a Free Estimate" button
- Phone number with click-to-call

8. Related Projects

- 3-4 similar projects in the same category or area
- Thumbnail images with links

SCHEMA MARKUP & GEO-TAGGING

Required Schema Types

Each project page should include multiple schema types for maximum SEO value:

1. Article Schema (for the project writeup)
2. Place Schema (for geo-tagging)
3. LocalBusiness Schema (for TEL)
4. Service Schema (for the service performed)
5. ImageObject Schema (for photo gallery)

Sample Combined Schema

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Article",
  "headline": "Panel Upgrade in Westlake, TX",
  "datePublished": "2026-01-15",
  "author": {
    "@type": "Organization",
    "name": "Texas Electric and Light"
  },
  "contentLocation": {
    "@type": "Place",
    "name": "Westlake, Texas",
    "geo": {
      "@type": "GeoCoordinates",
      "latitude": 30.2988,
      "longitude": -97.8103
    }
  },
  "about": {
    "@type": "Service",
    "name": "Electrical Panel Upgrade",
    "provider": {
      "@type": "LocalBusiness",
      "name": "Texas Electric and Light",
      "telephone": "(512) 547-4130",
      "areaServed": "Austin, TX"
    }
  }
}
</script>
```

Neighborhood Coordinates Reference

Use neighborhood center coordinates (not exact project addresses) for geo-tagging:

Neighborhood	Latitude	Longitude
Dripping Springs	30.1902	-98.0867

Westlake	30.2988	-97.8103
Lake Travis	30.3938	-97.9206
Downtown Austin	30.2672	-97.7431
Cedar Park	30.5052	-97.8203
Round Rock	30.5083	-97.6789
Tarrytown	30.2969	-97.7714
South Congress	30.2459	-97.7505
Bee Cave	30.3085	-97.9425

PHOTO REQUIREMENTS & GUIDELINES

Photo Types to Capture

Required for Every Project

- **Completed work hero shot:** Best overall view of finished work
- **Detail shots:** Close-ups of quality workmanship (clean wiring, labeled panels, neat installations)
- **Context shot:** Shows work in relation to the building/space

Highly Recommended

- **Before photos:** Document starting condition
- **Progress photos:** Show installation process
- **Equipment/brand shots:** Showcase quality equipment installed

Photo Technical Specifications

Specification	Requirement
Minimum Resolution	1920 x 1080 pixels (Full HD)
Preferred Resolution	2400 x 1600 or higher
Format	JPG or WebP (WebP preferred for web)
Orientation	Landscape (horizontal) preferred for hero shots
Lighting	Well-lit, avoid harsh shadows, use flash if needed
GPS/Location Data	Enable location services on phone camera (preserves EXIF data)

Image File Naming Convention

Pattern: [project-type]-[neighborhood]-[description]-[number].webp

Examples:

- panel-upgrade-westlake-completed-01.webp
- ev-charger-lake-travis-installation-02.webp
- restaurant-electrical-south-congress-before-01.webp
- commercial-panel-downtown-austin-detail-03.webp

Image Alt Text Guidelines

Alt text should be descriptive and include location keywords:

- "200 amp electrical panel upgrade completed in Westlake Texas home"
- "Tesla Wall Connector EV charger installation in Lake Travis garage"

- "Commercial electrical panel for South Congress restaurant in Austin"
- "Before photo showing outdated electrical panel in Tarrytown home"

INTEGRATION WITH NEIGHBORHOOD PAGES

Cross-Linking Strategy

Projects should create a web of internal links that strengthens both project pages and neighborhood pages:

From Project Pages

- Link to the neighborhood service page in the location section
- Link to the relevant service page (e.g., panel upgrades)
- Include in breadcrumbs: Home > Projects > Commercial > [Project]

From Neighborhood Pages

- Add "Recent Projects in [Neighborhood]" section
- Display 2-3 project thumbnails with links
- Update automatically as new projects are added to that area

From Service Pages

- Add "Recent [Service Type] Projects" section
- Shows proof of capability for that specific service
- Builds trust with potential customers

IMPLEMENTATION TIMELINE

Phase 1: Foundation (Week 1-2)

- Create /projects/ directory structure
- Build main projects index page template
- Build individual project page template
- Create category index pages (commercial, residential, specialty)
- Implement schema markup templates

Phase 2: Initial Content (Week 3-4)

- Document and photograph 3-5 recent completed projects
- Create first project pages using template
- Add project links to relevant neighborhood pages
- Submit pages to Google Search Console for indexing

Phase 3: Ongoing Operations

- Add 1-2 new projects per month
- Prioritize projects in target growth areas (commercial, premium neighborhoods)
- Ensure geographic spread across service area
- Track which projects generate leads and inquiries

CONTENT WRITING GUIDELINES

Project Title Format

Pattern: [Service Type] in [Neighborhood], TX

Examples:

- "200 Amp Panel Upgrade in Westlake, TX"
- "Restaurant Electrical Buildout on South Congress, Austin"
- "Tesla Wall Connector Installation in Lake Travis, TX"

Project Description Length

- **Overview:** 100-150 words
- **Scope of Work:** 150-250 words
- **Results:** 75-100 words
- **Total page content:** 400-600 words minimum

Privacy Considerations

- Never include exact street addresses
- Use neighborhood/city level location only
- Do not identify clients by name without permission
- Blur or avoid showing house numbers, street signs
- For commercial projects, may name business with permission
